RBcf: An VCF API for R.

Pierre Lindenbaum / yokofakun/ Institut du Thorax . Nantes.

April 23, 2020

1 Abstract

RBcf uses the Htslib C API for parsing VCF and BCF files. This API was written by a regular user of the htsjdk library who doesn't like R.

2 Examples

2.1 Htslib and Rbcf versions

Code:

```
# load the library
library(rbcf)
#print the version of the associated htslib
htslib.version()
#print the version of rbcf
rcbf.version()
```

Output:

```
> # load the library
> library(rbcf)
> #print the version of the associated htslib
> htslib.version()
[1] "1.10.2-dirty"
> #print the version of rbcf
> rcbf.version()
[1] "0.0-1"
>
```

2.2 Open and close a VCF file

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
# dispose the vcf reader
bcf.close(fp)
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
>
```

2.3 Print the INFOs in the VCF header

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
info <- bcf.infos(fp)
# dispose the vcf reader
bcf.close(fp)
# print the table
info
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
> info <- bcf.infos(fp)
> # dispose the vcf reader
> bcf.close(fp)
```

```
[1] TRUE
> # print the table
> info

>
```

3

2.4 Print the FORMATs in the VCF header

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
fmts <- bcf.formats(fp)
# dispose the vcf reader
bcf.close(fp)
# print the table
fmts
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
> fmts <- bcf.formats(fp)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
> # print the table
> fmts
   ID Number    Type                                        Description
PL PL      G Integer "List␣of␣Phred-scaled␣genotype␣likelihoods"
GT GT      1  String                                       "Genotype"
>
```

2.5 Print the FILTERs in the VCF header

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/gnomad.exomes.r2.0.1.sites.vcf",FALSE)
flt <- bcf.filters(fp)
# dispose the vcf reader
bcf.close(fp)
# print the table
flt
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/gnomad.exomes.r2.0.1.sites.vcf",FALSE)
> flt <- bcf.filters(fp)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
> # print the table
> flt
                                ID
PASS                          PASS

SEGDUP                      SEGDUP

PASS
AC0             "Allele␣Count␣is␣zero␣(i.e.␣no␣high-confidence␣genotype␣(GQ␣>=␣2
InbreedingCoeff
LCR
RF                                              "Failed␣random␣forests␣filte
SEGDUP
>
```

2.6   Print the Samples in the VCF header

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
# print the number of samples
cat(paste("Num.␣Samples=",bcf.nsamples(fp),".\n"))
# get the name for the 1st sample
cat(paste("First␣sample␣is␣",bcf.sample1(fp,1),".\n"))

# get the samples
```

```
samples <- bcf.samples(fp)
# dispose the vcf reader
bcf.close(fp)
# print the list
samples
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
> # print the number of samples
> cat(paste("Num.␣Samples=",bcf.nsamples(fp),".\n"))
Num. Samples= 5 .
> # get the name for the 1st sample
> cat(paste("First␣sample␣is␣",bcf.sample1(fp,1),".\n"))
First sample is  S1 .
>
> # get the samples
> samples <- bcf.samples(fp)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
> # print the list
> samples
[1] "S1" "S2" "S3" "S4" "S5"
>
```

2.7   Print the Dictionary in the VCF header

Code:

```
# load rbcf
library(rbcf)
# we don't need the index for this file
fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
dict <- bcf.dictionary(fp)
# dispose the vcf reader
bcf.close(fp)
# print the table
dict
```

Output:

```
> # load rbcf
> library(rbcf)
> # we don't need the index for this file
> fp <- bcf.open("../tests/data/rotavirus_rf.01.vcf",FALSE)
> dict <- bcf.dictionary(fp)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
> # print the table
> dict
     chrom size
RF01  RF01 3302
RF02  RF02 2687
RF03  RF03 2592
RF04  RF04 2362
RF05  RF05 1579
RF06  RF06 1356
RF07  RF07 1074
RF08  RF08 1059
RF09  RF09 1062
RF10  RF10  751
RF11  RF11  666
>
```

2.8 Print the Indexed Chromosomes

Code:

```
# load rbcf
library(rbcf)
# Open the indexed VCF
fp <- bcf.open("../tests/data/rotavirus_rf.02.vcf.gz")
# get the indexed contigs
contigs <- bcf.contigs(fp)
# dispose the vcf reader
bcf.close(fp)
# print the table
contigs
```

Output:

```
> # load rbcf
> library(rbcf)
> # Open the indexed VCF
> fp <- bcf.open("../tests/data/rotavirus_rf.02.vcf.gz")
> # get the indexed contigs
> contigs <- bcf.contigs(fp)
> # dispose the vcf reader
> bcf.close(fp)
[1] TRUE
> # print the table
> contigs
 [1] "RF01" "RF02" "RF03" "RF04" "RF05" "RF06" "RF07" "RF08" "RF09" "RF10"
[11] "RF11"
>
```
